Situation Awareness Brief

Thursday, July 27th 2017
As of 0900 CST

Tropical Weather Awareness

For the North Atlantic...Caribbean Sea and the Gulf of Mexico:

Disorganized cloudiness and showers extending from the Cabo Verde Islands southwestward across the Atlantic are primarily associated with a tropical wave. Slow development is possible over the next several days while the system moves westward or west-northwestward at 5 to 10 mph. * Formation chance through 48 hours...low...near 0 percent. * Formation chance through 5 days...low...30 percent.

Hazardous Weather

Hazardous Weather

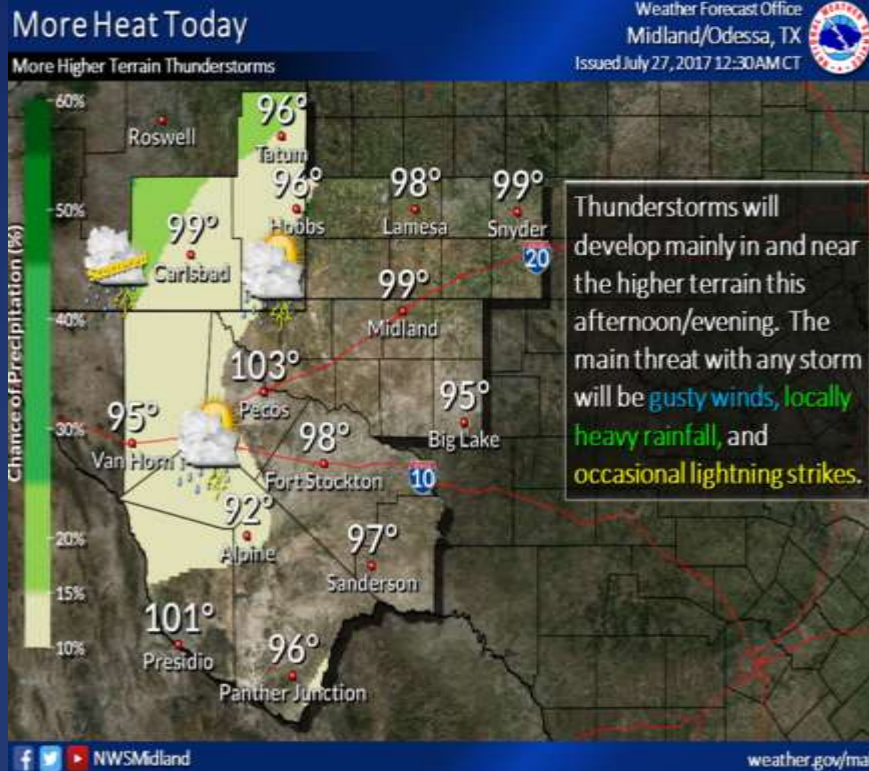

There is a slight risk for excessive rainfall today across the extreme northwest Texas Panhandles. Surrounding the slight risk area, there is a moderate risk for excessive rainfall across much of the Panhandle and also much of the western, central and northern Texas Panhandle.

Another day, another round of showers and thunderstorms across the Borderland. Plenty of moisture will couple with daytime heating to generate scattered to numerous storms and areas of heavy rain.

Hazardous Weather

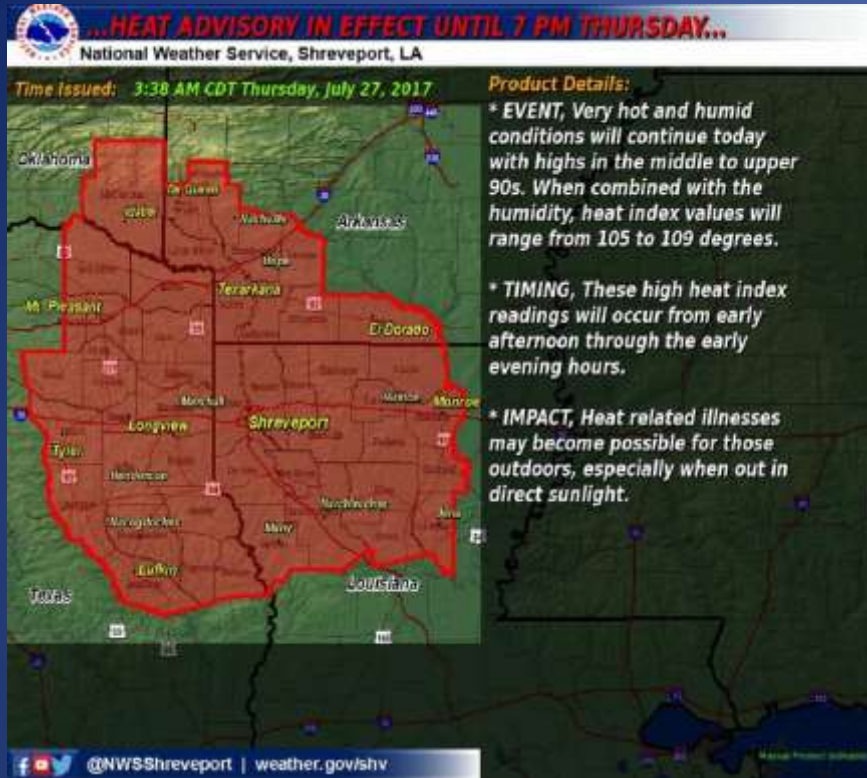

Hot temperatures today with isolated storms over the higher terrain. Gusty winds and locally heavy rainfall could occur with any of the storms

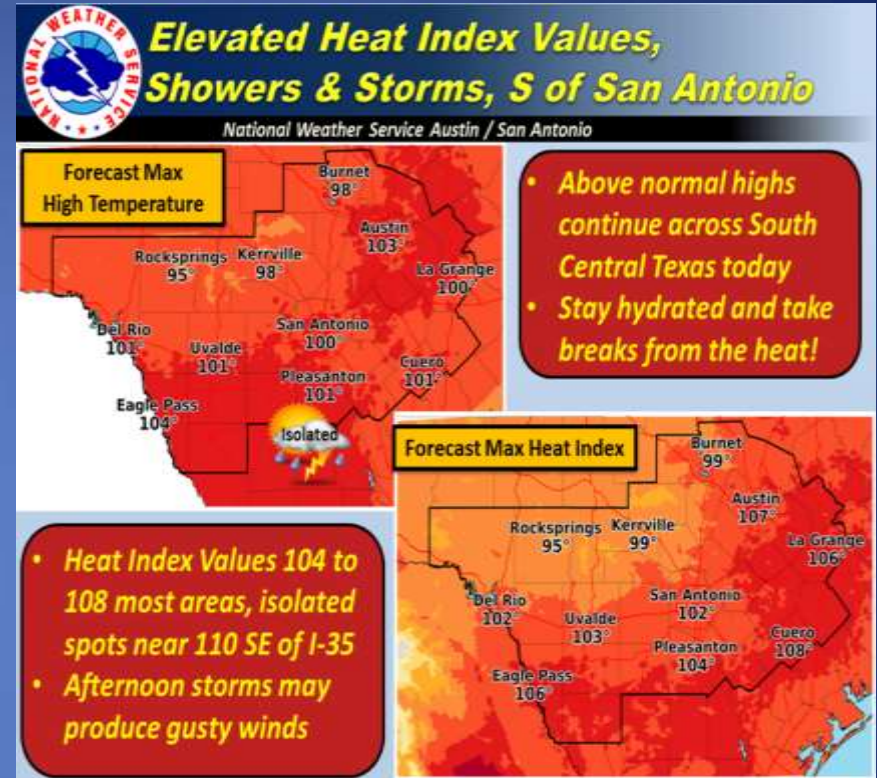

Today will be one of the hottest days so far this year across North and Central Texas. Skies will be mostly sunny and highs will be in the mid 90s to 103 degrees. Afternoon heat index values will reach 100 to 112 degrees! A Heat Advisory is in effect for areas along and east of a Killeen to Bowie line where heat index values will reach 105 to 112 degrees. Remember to stay hydrated, avoid strenuous activity, and never leave pets or children unattended!

Hazardous Weather

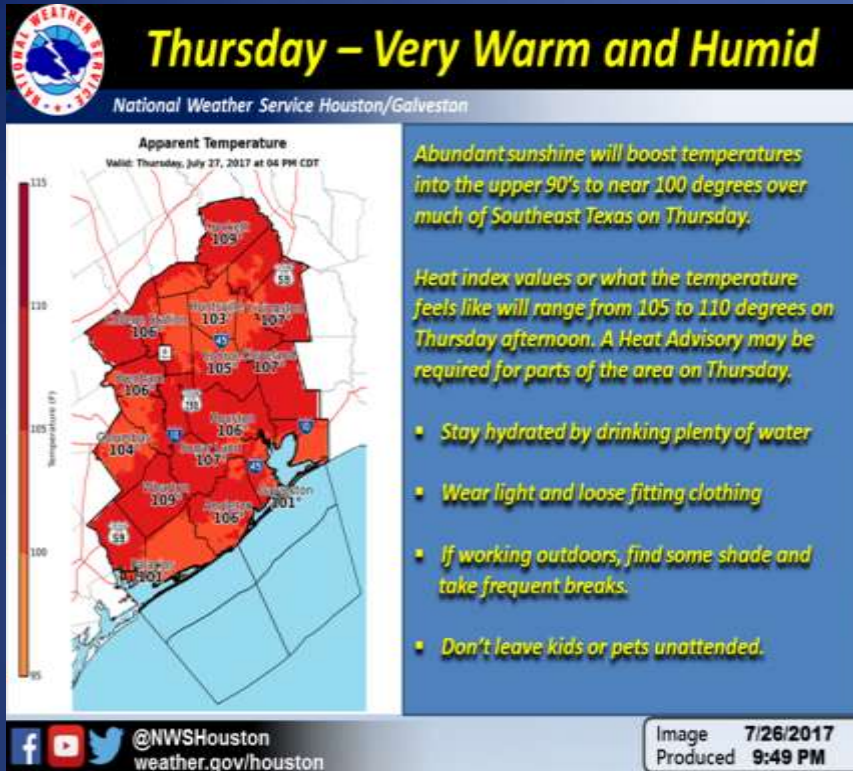

A Heat Advisory will be in effect through 7 pm today across the Four State Region which will include East and Northeast Texas... The combination of hot afternoon temperatures in the middle to upper 90s and humid conditions will result in Heat Indices of 105-109 degrees. Heat related illnesses will become possible for those involved in outdoor work and activities, especially when in direct sunlight. Remember if you must be outdoors, drink plenty of water, take more frequent breaks in the shade, and wear loose fitting and light weight clothing.

Another hot and rather humid day with elevated heat index values is expected across our area. High temperatures of 95 to 100 Hill Country and 100 to 105 South Central Texas are forecast. Heat index values of 104 to 108 are expected southeast of the Escarpment with isolated spots briefly reaching near 110 east of I-35. Isolated showers and thunderstorms are possible south of San Antonio and may produce gusty winds.

Hazardous Weather

Thursday will be very warm with high temperatures warming into the upper 90's to around 100 degrees. Heat index values or the apparent temperature will be between 105-110 degrees.

Another warm and humid day is in store for South Texas, with only a couple of isolated showers or thunderstorms inland. Heat index values of 105 to 109 degrees can be expected over most areas near and east of Highway 281. Highs will range from the lower 90s coast, and the mid 90s to around 105, the latter temperatures over western-most portions of South Texas. Stay hydrated!

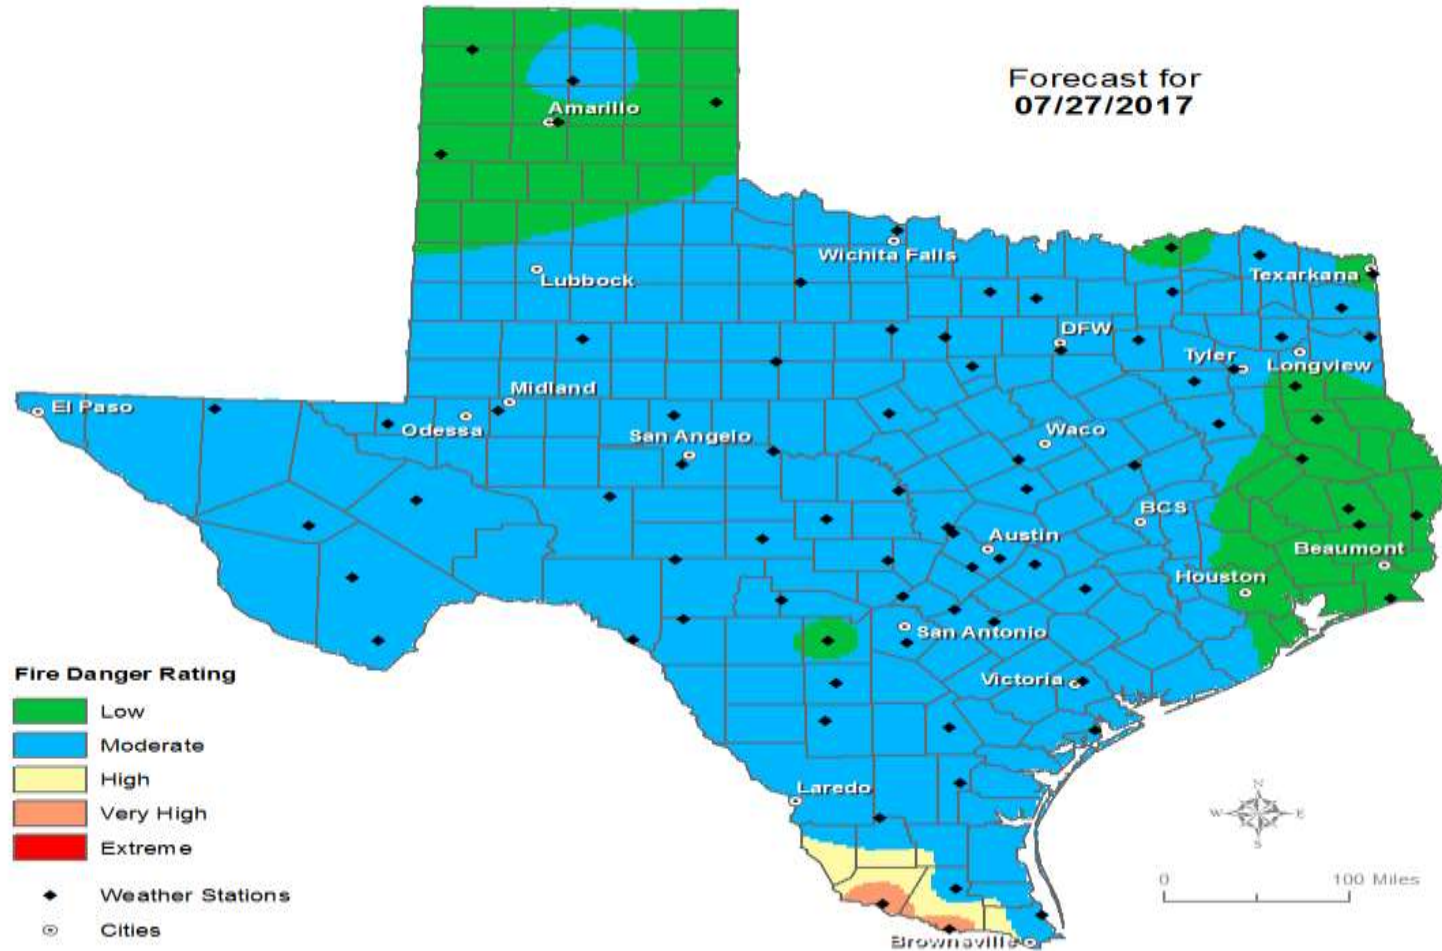

Weather Warning/Advisories Issued
